## The Benefits of a Plumbed in Cooler

This cooler is plumbed into your mains water supply and gives you the following benefits over the traditional bottle fed coolers:

- **Reduced Cost**  
If you buy a plumbed in cooler we can save you over 80% on the cost of running a bottled cooler, it's not hard to see why, when each 19 litre bottle costs around £6.50.
- **Total Cost Control**  
No more fluctuating costs depending on the weather and no more irritating bottle deposits to resolve.
- **Great Tasting Water**  
Our plumbed in coolers may be fitted with a filter which removes chemicals tastes and odours leaving fresh tasting water that's every bit as good as the bottled variety.
- **No Risk of Running Out of Water**  
Because the coolers are plumbed into your mains supply there is no risk of running out of water even through the hot summer months.
- **Health & Safety**  
Remove the risk of staff injury when changing heavy bottles.
- **No More Storage Headaches** Get rid of bottles and free up your valuable storage space.
- **Help the Environment**  
Help reduce the cost of bottle production and delivery.
- **Easy Installation**  
Typically it takes under half an hour to install a plumbed in water cooler, no pipes will be cut and there is no copper piping or soldering involved.

## Key Features...

- Serves Offices with over 40 Members of Staff
- Large Push Button Dispenser Controls
- Available in Chilled & Ambient / Chilled & Hot (With Hot Water Safety Tap)
- Both Desktop & Freestanding Models Available
- Built in 'Pop-up' Cup Dispenser

The Silver Mains Water Coolers are an environmentally friendly, convenient and cost effective way of providing a constant supply of fresh filtered water.

Offering total cost control, the coolers are connected directly into the mains water supply, the water being passed through an advanced in-line filtration system that removes organic chemicals, tastes and odours, leaving only crystal clear, fresh tasting water – and there's no time wasted handling heavy bottles, no valuable storage space lost and no chance of running out of water – especially on hot days.

Four stylish, robust models are available; two floor standing and two table top, each with a choice of dispensing options: one that dispenses chilled cold and hot filtered water – ideal for making coffee, soups and other hot drinks – and one that dispenses chilled cold and ambient – room temperature – filtered water.

#### **Silver Mains Water Cooler Features:**

- In-line filter removes organic chemicals, tastes, odours and helps prevent scaling (fitted inside machine on floor standing models, to the back of machine on table top models)
- Large push button dispenser controls – safer, more hygienic and easier to use than conventional faucets.
- Double front safety mechanism with re-set button
- Automatic hot tank overheat cut-out
- Single water outlet – more hygienic than conventional tap dispensers.
- Adjustable water block protection device - automatically detects water leakage if fitted
- High quality stainless steel fixed tank.
- Auto temperature controller (chilled 5°C - 10°C, hot 70°C - 85°C)
- On/Off and status neon indicator lights.
- Built in 'pop-up' cup dispenser (Floor Standing only)
- Integral carrying handle for easy movement.
- Silver/grey finish.
- Fitted moulded 13 amp plug.
